

Accessible
SOS connectivity
powered by space

Namuun (Nami) Bold | CEO

ONDO
SPACE

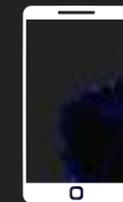

Seamless SOS Connectivity Where It Matters Most

3 billion+ people in remote areas
lack reliable communication

Communication delays
cost human and animal lives

Only 11% of smartphone users
have direct-to-cell connectivity

1

End-to-End Connectivity Ecosystem

Travelers

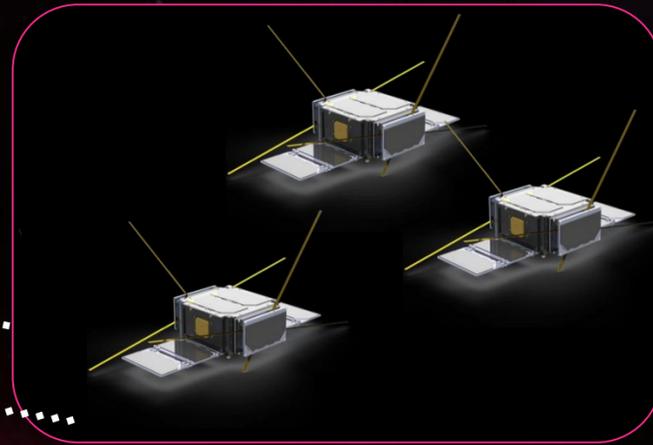

Herdsmen

Emergency

User presses the SOS Button

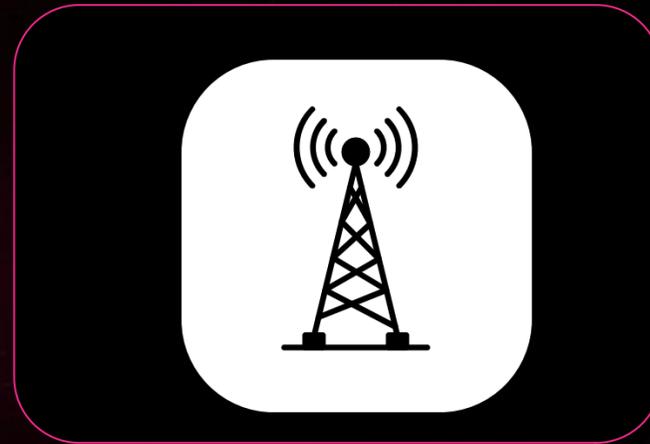

2

Signal relayed via ONDO's satellite constellation

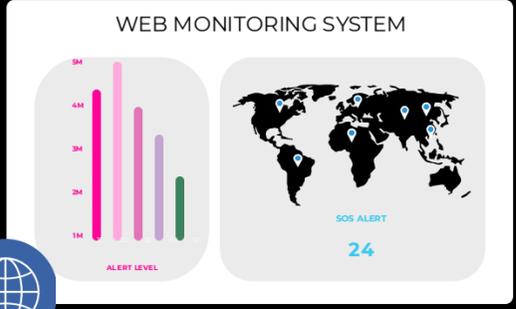

3

Ground stations receive the distress message

4

WEB MONITORING SYSTEM

ALERT LEVEL: 24

Real-time updates & rescue coordination

Seamless SOS Connectivity Where It Matters Most

SOS messaging global market

16B USD in 2024

69B USD by 2032

Traction & Progress

Web platform to monitor satellites and track devices

Fully automated & remote controlled ground station

12 0.5U satellites launched. Mongolia's first

Affordable SOS messaging device

Custom wild animal & livestock tracker

Mobile application for SOS & Wild animal tracker

2023

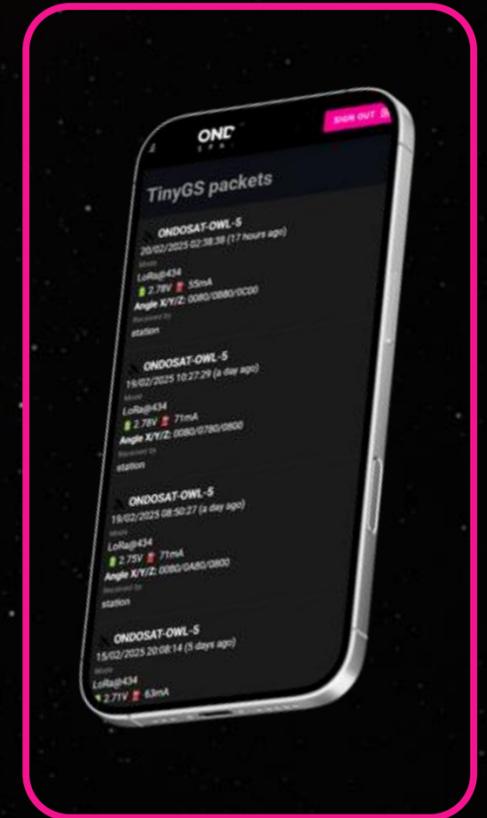

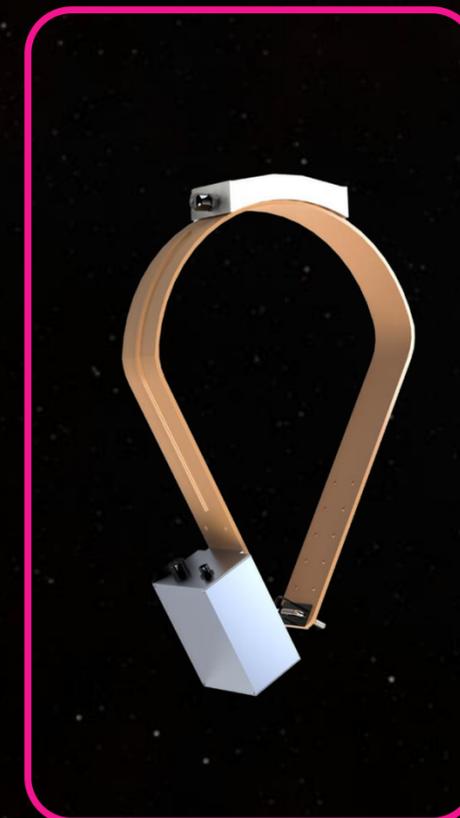

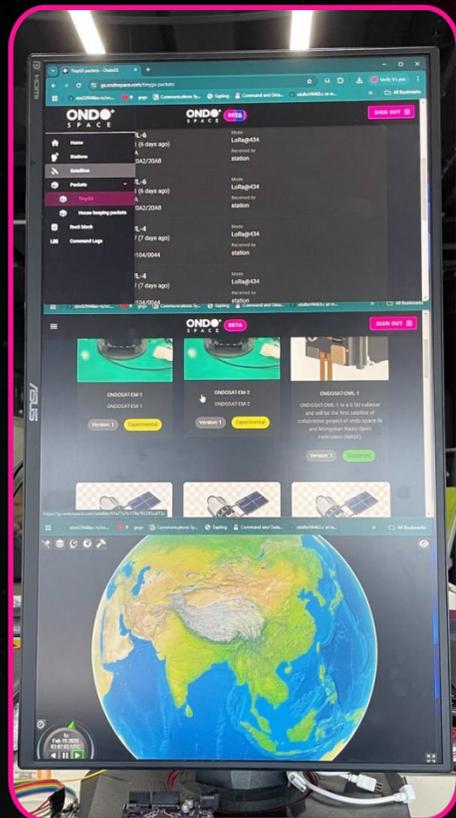

2023

2024

2025

2025

2025

Clients & Partnerships

Strategic partnerships with top Japanese technology universities

Client:
UNDP pilot project in Mongolia

Client:
Pilot project with global NGOs

How ONDO Space **Stands Out**

End-to-end integration

3.5x cheaper & faster satellites

Built in the emptiest country in the world

Durable devices for harsh environments

	<u>ONDO Space</u>	<u>Direct-2-Cell</u>	<u>Spotter Gen3</u>	<u>Garmin Inreach</u>
Device price 	\$100	\$600*	\$150	\$400
Subscription Cost 	Low	Moderate	High	Moderate
Mobile Required 	No	Yes	No	No
Battery Life 	1 Month	1 Day	14 Days	25 Days

**average smartphone cost*

Integrated Revenue Model

Target costumers

Developing Country

Governments

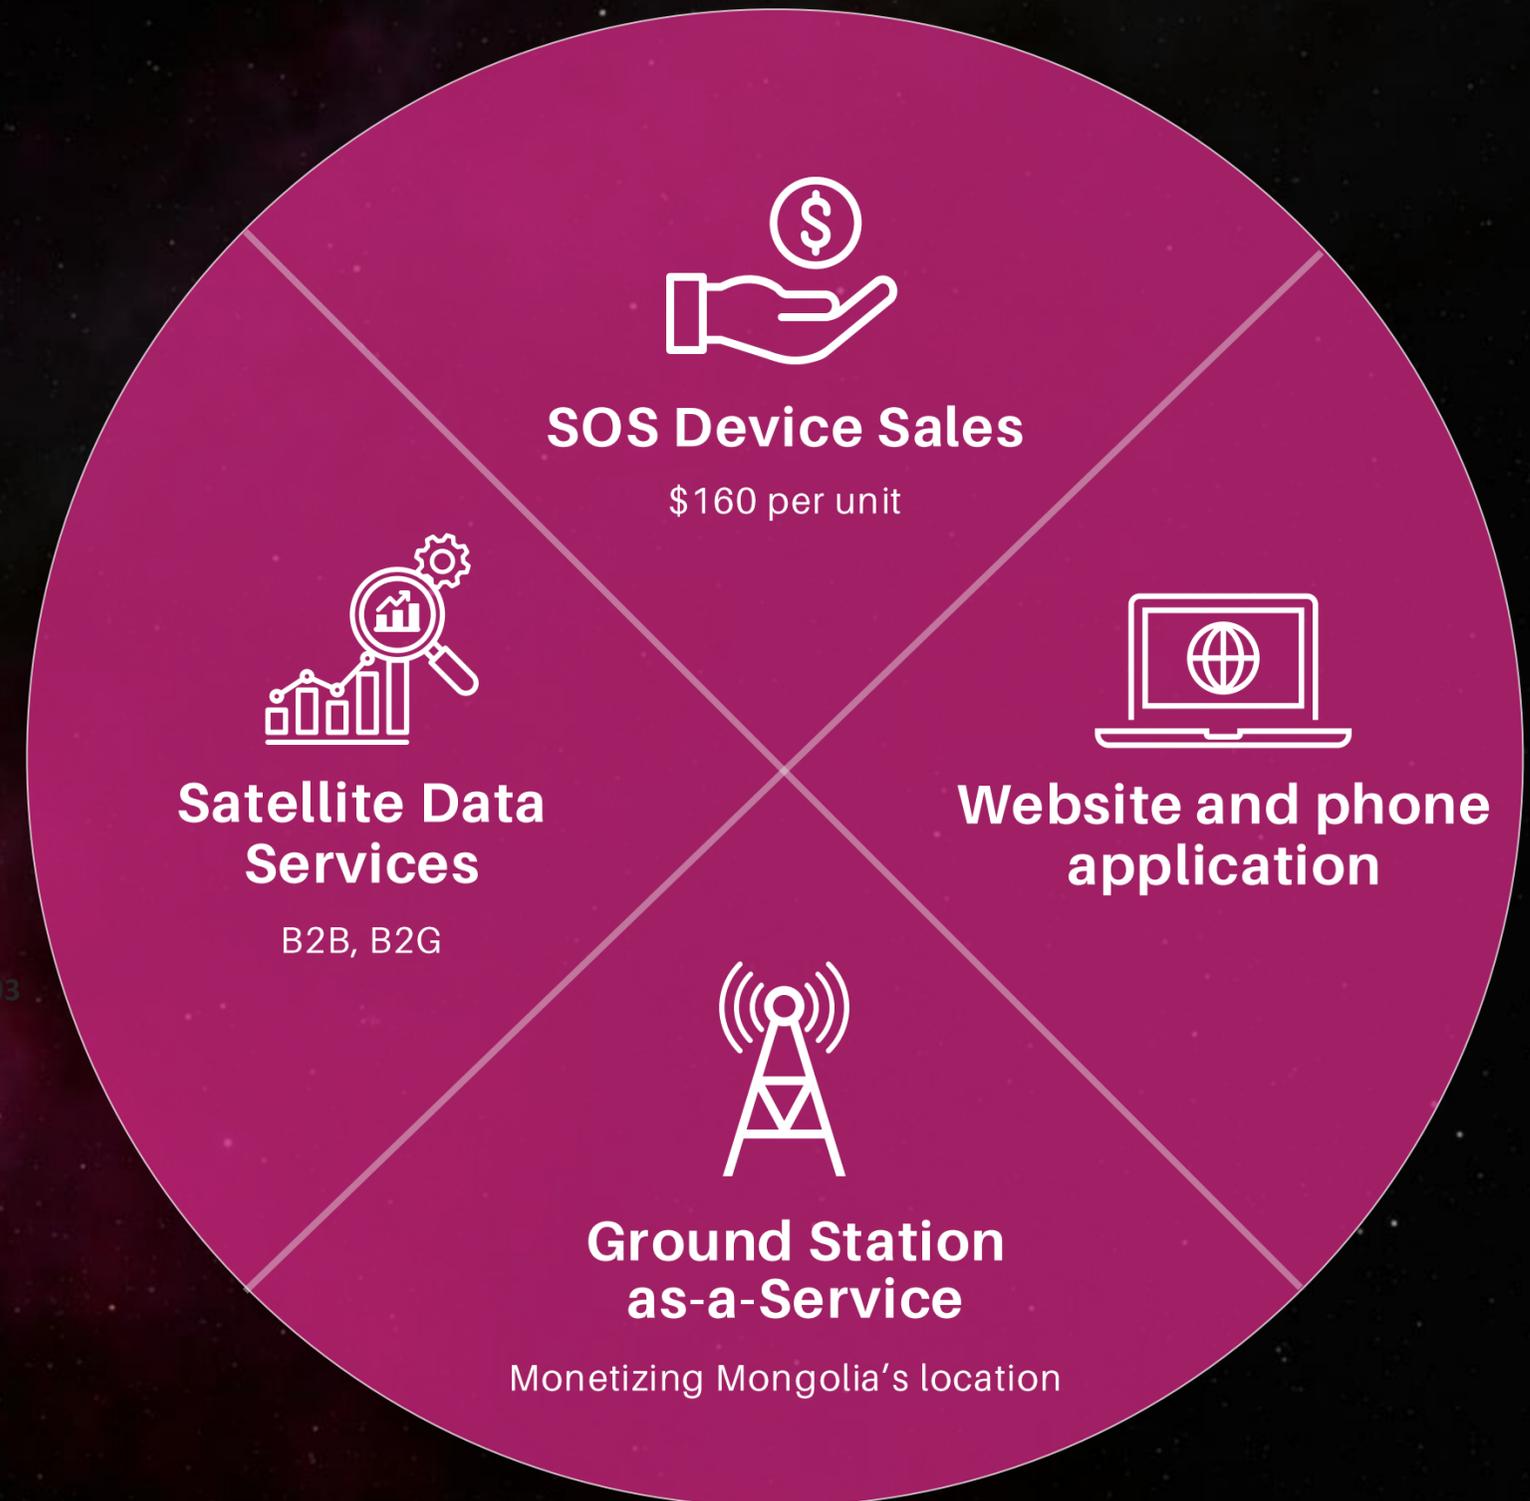

(Disaster response, border control)

Location bound business

(Mining, forestry, agriculture)

Citizens who live

in remote locations

03

Network expansion plan to join **the global movement**

	2023	2024	2025	2026	2027	Total
IoT satellites (0.5 U)	<i>R&D</i>	12	25	52	87	176
Ground station	-	<i>R&D</i>	3	3	2	8
R&D in remote sensing satellites	-	-	<i>R&D</i>	2	5	7
Revenue	-	-	\$ 500K	\$ 2M	\$ 7M	\$ 10M

Globally trained, deep-tech team of 11 engineers

CEO
Nami Bold

- AI Consulting Manager at EY US
- BSc Cornell University

CPO
Battulga Bayarsaikhan

- AI Senior Staff Software Engineer at Google US
- MSc Korean Advanced Institute of Science and Technology

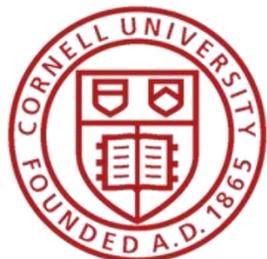

CIO
Erka Dashdondog

- Associate Professor, National University of Mongolia
- Member of National Space Council of Mongolia
- PhD in Space Technology, Kyushu Institute of Technology

CTO
Amar Dagvasumberel

- Engineering Lead at Andorean
- PhD in Space Systems Engineering, Kyushu Institute of Technology

Roadmap: **How We Save More Lives**

2025

Full-scale pilot in Mongolia

2026

Expansion to Central Asia

2027

176-satellite constellation
for near real-time global
coverage

2024

Twelve 0.5U cube-
satellites launched

Seed fundraising ask: 2.5 M USD

Produce upgraded SOS messaging devices

Build 3 new Ground Stations in Mongolia

Expand satellite network by ~25

R&D remote sensing satellites

Build an initial strategy & fundraising team in the US

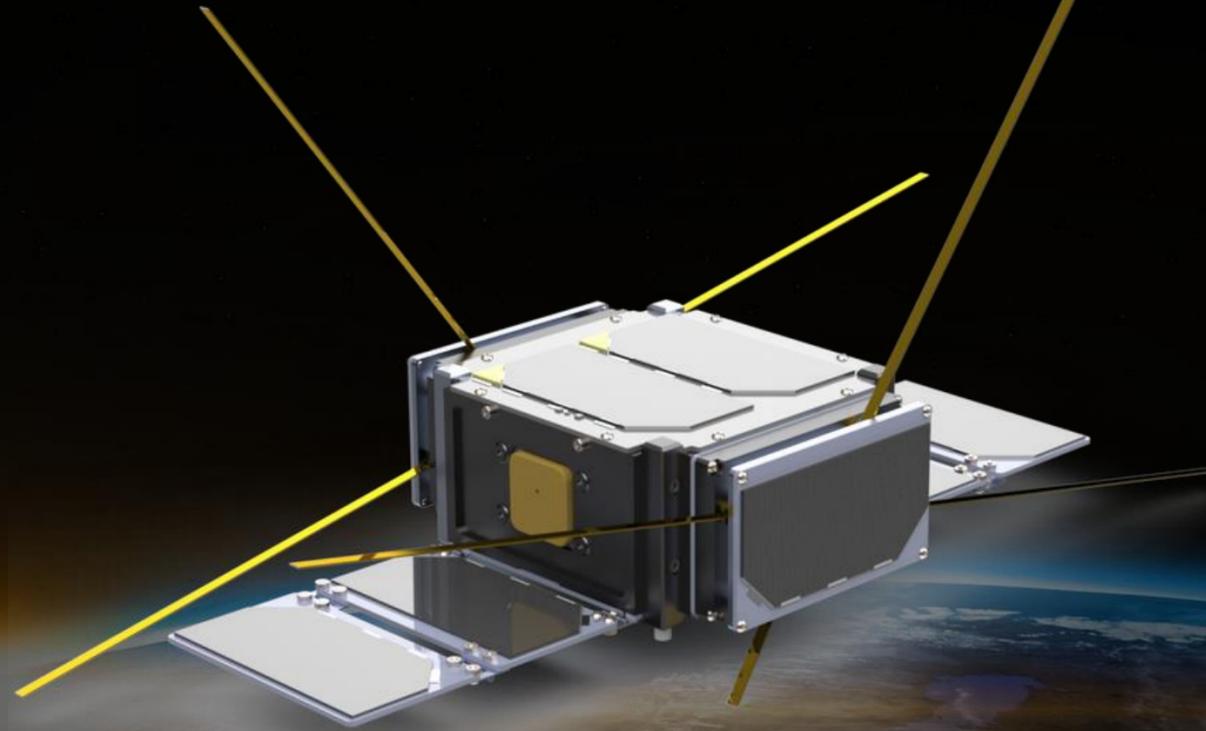

Thank you

Satellite technical specs

ONDO Space
Communication module

0.9 kg weight

11W Solar panel
power

Battery capacity,
10000 mAh

10cm x 10cm x 5 cm
(Stowed state), 0.5U

GPS accuracy
3 to 7 meters

Low Earth Orbit,
550km from Earth

Different types of
antenna

Operating Temp
-40C to 65C

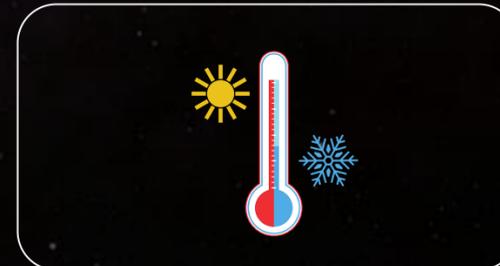

7.8 km/s speed

The ONDO SOS Messaging Device

-40C to +40C

**Performs in
harsh weather**

IP67

**Resistant to dust
and water**

Communication

**Integrated
Connectivity**

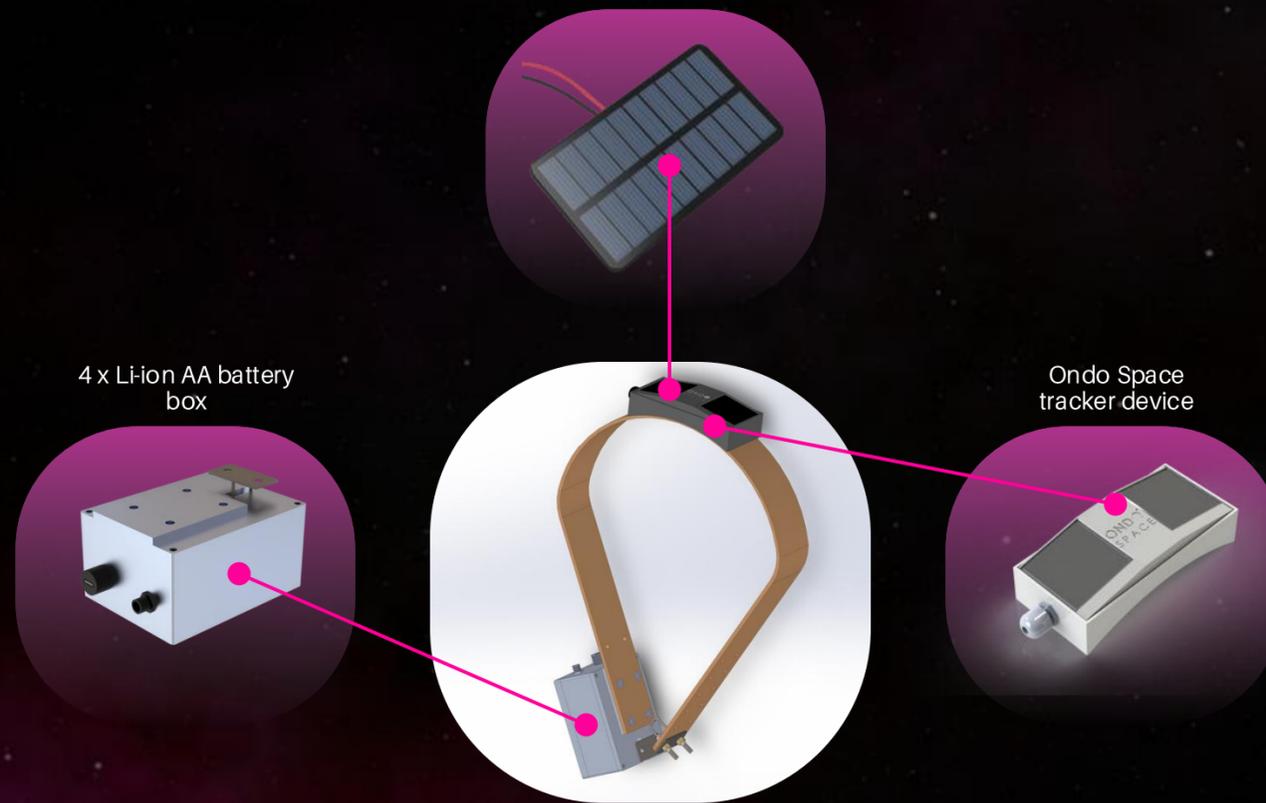

BLE, LoRa

**Next-generation
communication chips**

Designed with space-grade technology in mind

Wild animal tracker

General information

Satellite module

4G & 3G Satellite Hybrid tracking

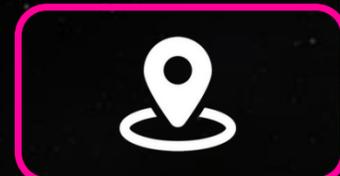

Rechargeable 5V

Battery capacity, 13400 mAh

Headrest release mechanism

GPS accuracy 3 to 7 meters

3 month battery life

3 types of antennas, GSM, GPS and Lora

Operating Temp -40C to 65C

Set transmit frequency

Environment temperature

Animal speed

Animal temperature

Above mean sea level

GPS location

Movement & acceleration

Ground Station

FULLY AUTOMATED GROUND STATION

The ground station can automatically connect to satellites, adjust radio frequencies and other settings, and autonomously organize the data received from satellites. It can also perform specialized functions in collaboration with our web platform.

REMOTE CONTROL

It is possible to configure the devices that connect to the satellite via the ground station remotely.

Web platform

GS.ONDOSPACE.COM

User: ONDO Space Engineers

A web platform that connects to the ground station, automatically retrieves satellite data, and enables signal transmission to satellites via the ground station.

TRACKER.ONDOSPACE.COM

User: SOS & Tracker device users

A system that collects data from satellites about ground devices, displays GPS location and additional information, and allows two-way communication by sending data back to the satellite via the ground station to reach ground devices.

SATELLITE.ONDOSPACE.COM

User: Accessible to everyone

A web platform that calculates satellite trajectories, including predicting when they will pass over Mongolia.

Mobile app

SOS SOS DEVICE APP

A mobile application that connects to a SOS device via Bluetooth and allows users to send custom messages from areas without connectivity.

ANIMAL TRACKER APP

A mobile application designed to track and monitor animal locations, movement patterns and behaviors providing valuable data for wildlife conservation and research.

Uniquely Mongolian competitive advantage

Commercial friendly regulatory environment and strong government relations

Engineering innovation at our core. Mongolia's top aerospace engineers under one roof

Vendor and supply chain access to a wide array of affordable options

Geographical advantage in the global satellite data ecosystem

ONDO Space solves the industry's **affordability issue**

0.5U IoT satellite

High cost of manufacturing

Slow end-to-end product lifecycle

Stringent regulatory environment

Global average

\$70 K per satellite

8-18 months

2-3 years

ONDO Space

\$20 K per satellite

2-6 months

9 months
